Companion to the Digital Growth Proposal. All links are live — best viewed on desktop.

1. Reading the Brief

The four links Digvijay shared are not a random shortlist — read together, they describe a very specific ambition. Here is what each one is actually asking for:

The reference	What it tells us
Awwwards	Sets the craft bar. This is where the world's best-designed sites are judged — the ask is for award-grade polish, not a template.
Locomotive	Sets the motion bar. Scroll-driven storytelling, smooth transitions, cinematic feel — a site that moves and feels alive.
Gree Global	Sets the category. An air conditioning manufacturer — proof he wants this energy applied to his own industry, not borrowed from tech or fashion.
Nidhi Auto	Sets the internal benchmark. The group's own recently-built site — the standard Ezentech must clearly step beyond.

The brief, in one sentence

Give Ezentech the craft of an Awwwards winner, the motion of Locomotive, and the industrial substance of Gree — and make it a clear generational step up from Nidhi Auto.

The gap nobody has filled

Here is the opportunity hidden in that brief. Award-grade design and air conditioning manufacturing almost never meet. Browse Awwwards and you will find agencies, fashion labels, crypto and car brands — hardly a single AC or HVAC manufacturer. Browse the AC industry and you will find capable, competent, thoroughly unremarkable corporate sites.

That means the references below are rare — and it means **Ezentech can credibly own the best-designed website in Indian AC manufacturing**. Not “one of the better ones.” The best. The bar in this category is genuinely low, and the brands Ezentech supplies will notice.

2. Tier 1 — Direct Industry: AC & HVAC Manufacturers

These are the closest matches to the brief: companies that make cooling and heating equipment, presented with real design ambition. Start here.

★ Hajster

<https://hajster.com/en> — Ukrainian heat pump manufacturer

Why it matters: This is the single closest answer to Digvijay's brief that exists. An HVAC manufacturer whose site feels like a premium consumer-tech brand — not an industrial supplier. Large-format product photography, sophisticated micro-animations, and a cohesive design language that makes heat pumps look genuinely desirable. It is the proof that this category can be beautiful.

Steal this: The premium product presentation (their NEBO and GRUNT units are shot like flagship phones), the restrained motion that guides your eye rather than showing off, and the confident typography. Show this to Digvijay first.

Gree Global

<http://global.gree.com/> — World's largest AC manufacturer — Digvijay's own pick

Why it matters: Worth studying honestly. Gree's scale and product breadth come across immediately, and the global/export structure is instructive for Ezentech. But the execution is closer to a corporate catalogue than an award-winner — which is precisely why Digvijay asked for more.

Steal this: The product architecture (residential / commercial / components cleanly separated) and the export-market framing. Improve on: the visual craft and motion, which is where Ezentech can leapfrog.

Daikin Global

<https://www.daikin.com/> — Global No.1 in air conditioning

Why it matters: The gold standard for narrative. Daikin does not sell air conditioners — it sells “Perfecting the Air.” An entire company positioned around a single, ownable idea, then supported with technology, sustainability and case-study depth.

Steal this: The idea that a manufacturer deserves a story, not just a spec list. Ezentech has one — design-integrated manufacturing, from chassis to finished unit — and it should anchor the whole site the way “Perfecting the Air” anchors Daikin's.

NIBE

<https://www.nibe.eu/> — Swedish climate solutions manufacturer

Why it matters: A masterclass in calm, confident, European industrial design. Clean grid, generous whitespace, excellent product photography, zero clutter. It reads as trustworthy and premium without a single flashy trick.

Steal this: The restraint. This is the antidote if the motion ambition ever threatens to overwhelm the substance — proof that quiet confidence also reads as expensive.

3. Tier 2 — The Competitive Set

These are the sites Ezentech's actual buyers open in the next browser tab. A procurement head shortlisting an AC contract manufacturer will compare Ezentech against exactly these three. This is the bar to beat — and, encouragingly, it is a beatable bar.

Amber Group

<https://www.ambergrouppindia.com/> — India's #1 AC OEM/ODM — the market leader

Why it matters: The most important competitor site to study. Amber presents scale first: facilities, capability breadth, blue-chip clients, and a clear OEM/ODM value proposition. Solid, corporate, credible.

Steal this: The capability-first structure and the way client trust is established early. But note what is missing: no real craft, no motion, no memorable idea. Ezentech can match the substance and win decisively on design.

EPACK Durable

<https://epackdurable.com/> — #2 RAC ODM in India — ~24% market share

Why it matters: The sharpest of the Indian peers. Clean, modern, well-organised — clearly the most recently built of the three. It leads with customisation and ODM flexibility, which is smart positioning for winning brand accounts.

Steal this: The ODM customisation narrative ("we build to your spec") and clean product/component separation. Ezentech's in-house chassis design is a stronger version of this same story — it should be told louder.

PG Electroplast

<https://www.pg-el.in/> — 2nd-largest RAC finished-goods player

Why it matters: Broad, diversified EMS positioning. Heavy on corporate and investor content — useful if Ezentech ever courts institutional attention, less so for winning a sourcing manager.

Steal this: The credibility architecture (certifications, clients, capacity, financials). Avoid: letting corporate/IR content crowd out the buyer journey. Ezentech's site must serve the procurement head first.

The honest verdict on the competitive set

None of the three is anywhere near award-grade. They are competent corporate sites: informative, safe, forgettable. Not one of them would survive a first round at Awwwards.

That is the whole opportunity. Ezentech does not need to out-spend Amber — it needs to out-design them. In a category where every competitor looks the same, the best-looking site wins the shortlist before a single spec is read.

4. Tier 3 — Award-Grade Industrial

Digvijay wants Locomotive-level craft. These prove it can live inside heavy industry — aerospace, equipment, hardware — without becoming style over substance. Use these to sell the ambition internally.

4.1 Manufacturers who design like tech brands

- **iCOMAT** — Bristol aerospace composites firm, Awwwards-recognised. Takes genuinely complex manufacturing technology and turns it into a clear, minimal visual narrative. The best argument that technical depth and beautiful design are not enemies.
- **Velux** — opens with video that shows the product in real spaces, and carries that visual storytelling through every product page. A model for how Ezentech should use plant and product footage.
- **Airthings** — cleanly splits “home” and “business” journeys. Directly relevant: Ezentech must serve domestic brands, component buyers and export importers without confusing any of them.
- **Robin Radar Systems** — a dark, high-tech palette that makes engineering feel advanced and serious. A strong direction candidate for Ezentech.
- **SpaceX** — the reference everyone in the room already understands. Full-bleed imagery, huge type, near-zero clutter, total confidence. Useful shorthand when explaining the ambition to stakeholders.

4.2 Where to keep browsing

Awwwards → **Business & Corporate**: the curated feed of award-winning corporate sites, updated constantly. The most efficient place for Digvijay to keep hunting — and it stays current long after this document is out of date.

[awwwards.com/websites/business-corporate/](https://www.wwards.com/websites/business-corporate/)

5. The Design Direction for Ezentech

Synthesising everything above — here is what we would actually build, and the signature ideas that would make it award-worthy rather than merely modern.

5.1 Signature ideas — the things people would remember

Idea	What it does
The exploded AC unit	A scroll-driven 3D animation that pulls a split AC apart mid-air — chassis, heat exchanger coil, copper tubing, moulded fascia — each part labelled “made in-house.” This single interaction tells the entire backward-integration story without a word of copy. It is the hero moment, and no competitor has anything like it.
The line, in motion	Cinematic factory footage as a scroll-driven sequence — sheet metal in, finished unit out. Turns the four plants from a claim into an experience. Locomotive-style motion, entirely in service of proof.
Interactive capability map	India map with the four plants; hover to reveal capacity, capability and certifications. Makes scale tangible and instantly answers the sourcing manager’s first question.
The lab, on camera	The NABL-accredited psychrometric lab presented as a genuine differentiator — few competitors can show one. Procurement de-risking, told visually.
Live trust wall	The Nidhi Group already displays LG, Daikin, Carrier, Havells, Honeywell and Panasonic. Ezentech’s LG “Role Model Supplier” recognition deserves the same prominence — stated properly, it out-punches every competitor’s logo strip.
Frictionless RFQ	A structured enquiry engine that stays one click away throughout. Beautiful is the point of entry; the qualified enquiry is the point.

5.2 The visual language

- **Dark, engineered palette** — deep graphite or midnight steel with a single confident accent. Reads as precision engineering, and makes product photography sing (see Robin Radar, Hajster).
- **Large, confident typography** — big statements, generous whitespace, nothing crowded. Scale communicates scale.
- **Real photography, not stock** — the plants, the lines, the lab, the chassis. This is non-negotiable; it is the difference between credible and generic. A guided shoot is scoped in the main proposal.
- **Motion with intent** — scroll-driven reveals and micro-interactions that guide attention and reward exploration. Never motion for its own sake.

5.3 One honest caution

Craft, without breaking the machine

Awwwards-style sites are often heavy — and heavy sites load slowly. Slow sites rank worse on Google, get cited less by AI search, and frustrate a procurement head who just wants a spec sheet. That is a real trade-off, and it is worth naming rather than discovering later.

Our approach: build to a strict performance budget. Cinematic on the homepage where the emotional job is credibility; fast and frictionless on product, component and RFQ pages where the commercial job is

conversion. Ezentech gets the award-grade feel *and* the rankings — but only if that discipline is designed in from day one, not bolted on afterwards.

5.4 Next step

The fastest way to settle a design conversation is to stop describing and start showing. On approval, we will design a full homepage concept for Ezentech — real layout, real motion, real product — so Digvijay can see his own company in this language rather than imagining it through someone else's site.
